

Aker

INTRODUCING AKER PEST NETWORK 2018 Beta Release

Regional pest measurements and analytics that you can trust. Aker is introducing a new service and technology to detect insect and disease pressure along with environmental and fertility stress. Aker will collect thousands of in-field crop scouting observations in Faribault County, Minnesota. Gain early knowledge on when and where to spray fungicide and insecticide.

FEATURES

- Weekly regional county alerts on pests and thresholds via email
- Access to online interactive map to assess pest movement across your region
- Certified agronomist review of all crop condition and pests
- Service starts around June 1, 2018

RETAIL VALUE: \$300 for entire season
